- 1. unpaid care and domestic work**
- 2. inequality in access to paid work**
- 3. violence against women**
- 4. Power, voice and decision-making**
- 5. ...and the need to assess women's wellbeing through a multi-dimensional/intersectional lens**

Emerging data in critical areas: an eye on the care crisis and surge in domestic violence

The pandemic has intensified women's unpaid care and domestic workloads

Share who reported an increase in time spent, based on 22 countries in Asia and the Pacific and Europe and Central Asia:

Men are much more likely to say they do not engage in these activities than women.

While only **6%** of women say they never engaged in cleaning,

44% of men report the same.

Access to safe water, sanitation and hygiene is critical for protecting human health and reducing women's unpaid work

Women and girls are responsible for collecting water in

Globally,

4 billion
3 billion

people are deprived of safely managed sanitation and
people lack access to clean water and soap at home.

The pandemic has revealed both the importance and the fragility of care arrangements

Less than **1 in 5** of labour market and social protection measures enacted to tackle the COVID-19 crisis are gender sensitive.

Unpaid care work needs to be measured, recognized, valued and, most important, supported through diverse measures.

Policies should include expansive and inclusive social protection for unpaid caregivers and greater access to paid family and sick leave.

Domestic violence has grown globally in parallel to the virus

Violence takes many different forms

In Cuenca, Ecuador,

Globally in 2019, over

1,200 incidents of violent attacks and threats against health care workers were reported — early reports in 2020 indicate the pandemic will worsen the situation.

Cyberviolence is also all too common:

In Australia, reports of online abuse and bullying have increased by **50%** since social distancing started.

Women with disabilities are at increased risk

Women with disabilities are up to

2x more likely to experience violence from partners and family members than women without disabilities.

Experience of sexual violence is up to

10x higher for women with disabilities than women without disabilities.

Women and girls with disabilities may find it harder to report violence and abuse and access help due to the nature of disability as well as isolation and dependence on (or fear of) caregivers.

Support is urgently needed for women and girls experiencing violence during the pandemic. Governments need to:

- 1.** Make urgent and flexible funding available for women's rights organizations and recognize their role as first responders.
- 2.** Support health and social services to continue their duty of care to survivors and to remain accessible.
- 3.** Ensure that services for survivors are regarded as essential, remain open, are adequately resourced and place a high priority on police and justice responses.

Being part of a couple, especially with young children, is associated with lower participation rates for women and higher rates for men

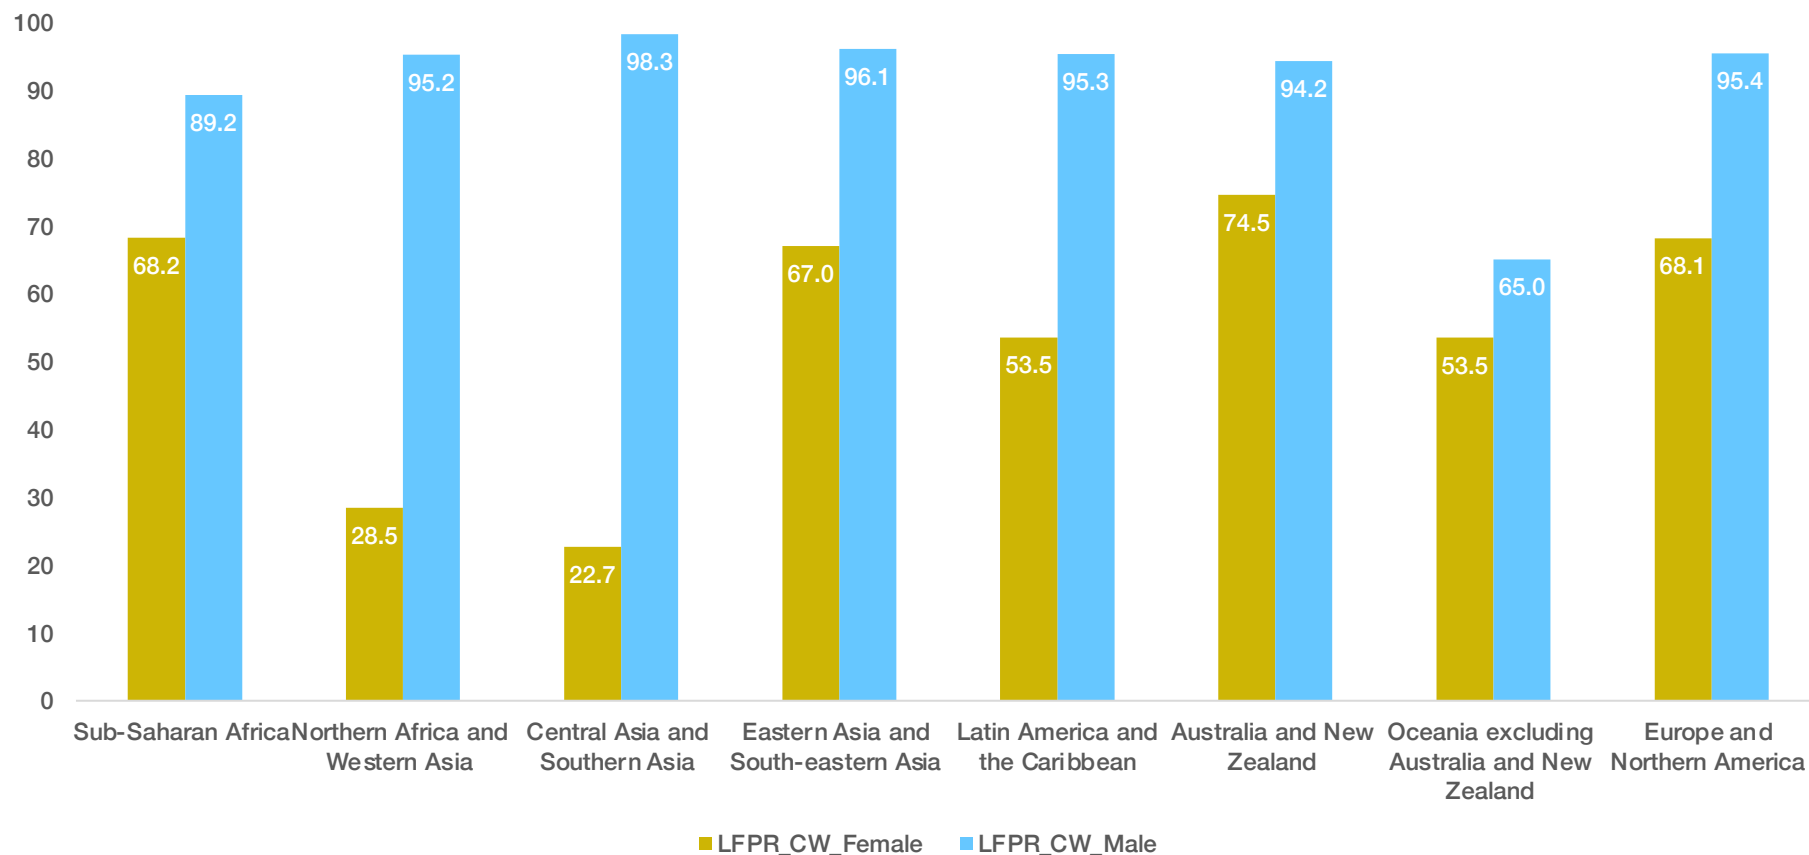

Overall labour force participation rate, by sex

Labour force participation rates, by sex and type of household

Source: UN Women/ILO's [Spotlight on Goal 8: The Impact of marriage and children on labour market participation](#).

Labour force participation rates of women and men (aged 25-54) in couple with children households, by region (percentage)

Gender equality is about power and about how that power is distributed in society

Percentage of seats held by women in national parliaments between 2000 and 2020, by region

Source: [Report of the Secretary-General E/CN.6/2021/3](#)

LEAVE NO WOMAN OR GIRL BEHIND: Why a multidimensional and multisectoral approach matters

PROPORTION OF WOMEN AND GIRLS AGED 15–49 IN NIGERIA WITH ONLY SIX YEARS OF EDUCATION COMPLETED OR LESS, BY LOCATION, WEALTH AND ETHNICITY, 2013

Source: UN Women calculations based on microdata from NPC, Federal Republic of Nigeria and ICF International 2014.

Note: In the left-hand graph, all groups are shown and ranked from most to least deprived, only groups with insufficient sample size are not shown (n<100). The bar charts to the right present results for a selection of these. For full group disaggregation, see Annex Table 3.

Key message: Inequalities accumulate through life and are most acutely felt by women and girls from poor and marginalized groups.

Monitor all 17 SDGs from a gender perspective

- ✓ Map existing data sources, create inventories of sex-disaggregated statistics and gender-specific indicators, use existing data to analyse the SDGs from a gender perspective.
- ✓ Establish baselines and monitor progress and gaps by digging deeper, going beyond national aggregates.
- ✓ Bring together qualitative and quantitative data and information for a complete picture.
- ✓ Develop protocols that aim to reduce gender biases in data collection and data processing, including training of enumerators and careful consideration of survey and sample design.
- ✓ Collect data on targeted groups for which data is not currently collected or for which data that exists is limited.

-- e.g., data on well-being of individuals with diverse gender identities and women and girls with disabilities and so on.

THANK YOU!

COVID-19 Will push millions more into extreme poverty

The COVID-19 crisis will likely increase female poverty

Gender poverty gaps will worsen by 2030

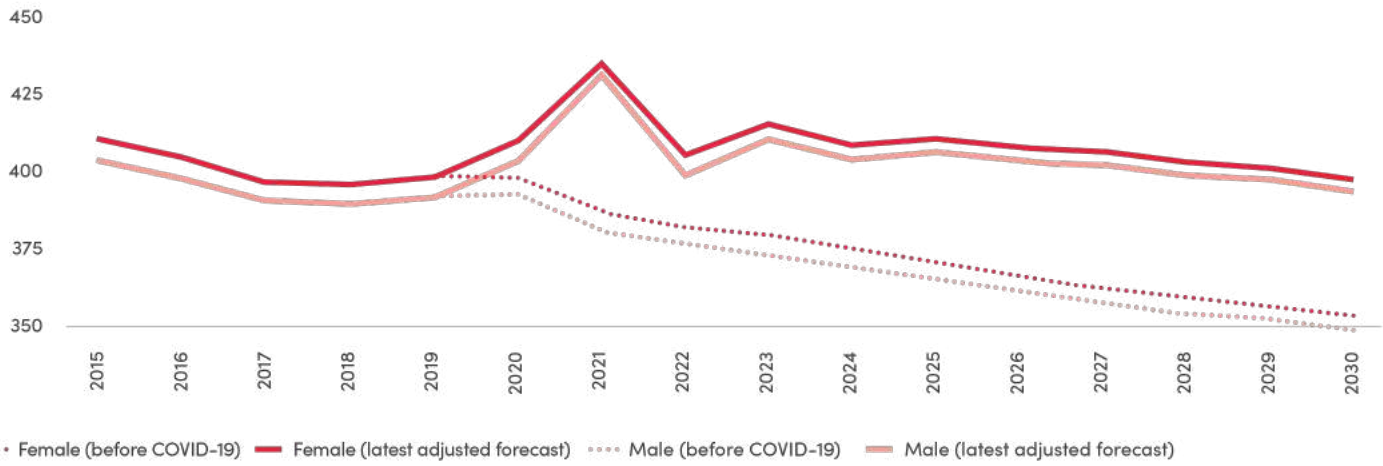

Gender-responsive policymaking is key for closing gender poverty gaps

Unless measures are taken to shield the most vulnerable, 435 million women and girls will be living on less than \$1.90 a day worldwide by 2021 – including 47 million as a result of COVID-19

Global population living below the international poverty line, by sex, 2015–2030 projection (millions)

Source: UN Women, *From Insights to Action: Gender Equality in the Wake of COVID-19, 2020*.

Note: This analysis is based on a sample of 129 countries and areas accounting for 89 per cent of the global population. The latest adjusted forecasts for men and women respectively are based on the International Monetary Fund's June 2020 downward revision in global economic growth.

* The term 'gender-specific indicators' is used here and in subsequent sections of the Gender Snapshot to refer to indicators that explicitly call for disaggregation by sex and/or refer to gender equality as an underlying objective. For a full list of gender-specific indicators by Goals, see pages 21-23 of this publication.

Proportion of employed population living below \$1.90 a day, 2019 (percentage)
